

ASUGALAKX

MASTER DOCUMENT v1.0

AI-Powered Market Intelligence & Web3 Community
Solana Ecosystem Blueprint

TRADE • LEARN • GROW

Purpose

Blueprint terpadu untuk brand, website, 7 AI agents, ASGX token, NFT, technical architecture, whitepaper, roadmap, database, API, smart-contract specification, dan development gates.

Status: Draft / Architecture Specification. Tokenomics, utility, supply, timeline, dan mekanisme governance adalah rancangan kerja yang harus melalui legal, technical, market, dan security review sebelum deployment/publication.

0. EXECUTIVE SUMMARY

ASUGALAKX adalah ecosystem market intelligence yang menggabungkan market data, news verification, AI research, education, community, dan Web3/NFT. ASGX ditempatkan sebagai utility layer, bukan janji keuntungan atau return yang dijamin.

CORE PRINCIPLE: DATA → ANALYSIS → CONTEXT → COMMUNITY

1. FINAL BRAND

Brand: **ASUGALAKX**

Positioning: **Market Intelligence & Trading Community**

Direction: AI-powered intelligence untuk Crypto, Stocks, Forex, Macro, dan Web3.

Visual: Deep Black #050505, Neon Purple #7B2DFF, soft violet glow, white, chrome/silver. Premium editorial, futuristic Web3, modular dashboard, restrained glow.

Brand guardrail: no fake performance, fake partnerships, fake volume, guaranteed returns, atau AI yang menyamarkan probabilistic analysis sebagai kepastian.

2. WEBSITE ARCHITECTURE / SITEMAP

Primary navigation: HOME / MARKETS / NEWS / ANALYSIS / CRYPTO / STOCKS / FOREX / WEB3 / AI / ACADEMY / COMMUNITY / NFT / TOKEN / DOCS.

Routes: /, /markets, /news, /analysis, /ai, /academy, /community, /nft, /token, /docs.

Homepage: Hero → Market Pulse → AI Market Context → Latest News → Research → Featured Assets → Academy → Community → NFT/Character → ASGX Utility → Footer/Disclosures.

UX principle: intelligence first, token second. Pengunjung harus bisa memahami nilai produk tanpa membeli/menyimpan token.

3. 7 AI AGENTS

01 Scout — mencari market/news/macro/Web3 signals.

02 Verification — cross-check sumber, tanggal, klaim, status konfirmasi.

03 Market — price, volume, volatility, structure, liquidity, correlations.

04 Macro — hubungan DXY, yields, commodities, equities, FX, crypto.

05 Context — what happened, why it matters, scenarios, risks.

06 Research — briefing, reports, sector research dengan citations.

07 Community — mengubah intelligence menjadi education, discussion, events, dan posts.

AI output contract: SOURCE → EVIDENCE → CONTEXT → SCENARIOS → RISKS → TIMESTAMP.

4. ASGX TOKEN UTILITY

ASGX adalah rancangan utility token di Solana. Potensi utility: AI credits; premium research; selected Academy features; community/events; NFT ecosystem; governance untuk fungsi yang benar-benar diterapkan; creator/researcher rewards dengan aturan transparan.

ASGX tidak boleh dipasarkan sebagai token yang pasti naik, guaranteed yield, profit, atau fixed return. Utility harus masuk akal walaupun harga token berubah.

5. TOKENOMICS — WORKING DRAFT

Network: Solana **Symbol:** ASGX (provisional) **Illustrative supply:** 1,000,000,000

Allocation	%	Amount
Ecosystem	30%	300,000,000
Community	20%	200,000,000
Liquidity	15%	150,000,000
Treasury	15%	150,000,000

Development	10%	100,000,000
NFT / Creator	5%	50,000,000
Partnerships	5%	50,000,000

Draft only. Final vesting, TGE, liquidity, treasury, wallet disclosure, and sale mechanics require legal/security review.

6. NFT ARCHITECTURE

Collection concept: **8,888 ASUGALAKX characters — Same Mask. Different Soul.**

Trait layers: MASK, HOODIE, ARMOR, BACKGROUND, EYES, ACCESSORIES, COLOR/AURA, PERSONALITY/EXPRESSION.

Pipeline: NFT metadata → trait parser → rarity/aura engine → character profile → 3D character specification → animation profile → motion video.

Rarity and aura are creative/product attributes, not promises of financial value.

7. TECHNICAL ARCHITECTURE

Frontend: Next.js/React + Tailwind. Backend: Node.js/TypeScript API. Database: PostgreSQL. Cache/queues: Redis-compatible layer. AI: provider-agnostic agent orchestration. Data: licensed market APIs + approved public sources. Storage: object storage/content-addressed storage where appropriate. Blockchain: Solana + standard fungible-token/NFT primitives, with custom programs only when necessary. Observability: logs, metrics, tracing, alerts.

DATA SOURCES → INGESTION → NORMALIZATION → DATABASE/CACHE → AGENT ORCHESTRATION → VERIFICATION → CONTEXT → API → WEB / PWA / COMMUNITY

8. DATABASE & API BLUEPRINT

Core entities: users, profiles, roles, assets, market_snapshots, news_articles, sources, research_reports, agent_runs, agent_outputs, citations, alerts, watchlists, courses, lessons, community_posts, comments, events, nft_collections, nft_traits, nft_metadata, wallets, token_allocations, vesting_schedules, rewards, audit_logs.

API groups: /api/markets, /api/news, /api/analysis, /api/agents, /api/research, /api/academy, /api/community, /api/nft, /api/token, /api/users.

Every intelligence response should preserve source IDs, timestamps, and a clear separation between retrieved facts and generated analysis.

9. SMART-CONTRACT / TOKEN SPECIFICATION

Initial scope should remain minimal. Use standard Solana fungible-token infrastructure where possible. Define: mint authority policy; freeze authority policy if needed; decimals; supply/mint policy; treasury/multisig; distribution wallets; vesting/locks; admin key rotation; event/logging; tests; deployment verification; independent security review.

Never fabricate a contract address, authority, deployment status, exchange listing, or audit. Publish only after it actually exists and is verified.

10. WHITEPAPER STRUCTURE

1 Abstract • 2 Problem • 3 Vision • 4 Market Intelligence • 5 7-Agent Architecture • 6 Data & Verification • 7 ASGX Utility • 8 Tokenomics • 9 NFT/Character • 10 Community & Academy • 11 Technical Architecture • 12 Security • 13 Governance • 14 Roadmap • 15 Risks • 16 Legal/Regulatory Disclosures • 17 Contributors • 18 References.

Clearly separate LIVE, IN DEVELOPMENT, and PLANNED features.

11. ROADMAP

01 Foundation — brand, website, docs, data-source plan, compliance framework.

02 Market Intelligence — market data, newsroom, analysis, calendar.

03 AI Agents — 7-agent suite, research, verification, dashboard.

04 Community — accounts, forum, events, journal, learning.

05 NFT — 8,888 collection, metadata, 3D character and motion system.

06 ASGX Token — deployment, utility integration, treasury controls.

07 Expansion — PWA/mobile, integrations, partnerships.

08 Full Ecosystem — additional Web3 integrations subject to review.

Do not lock fixed calendar dates until scope, staffing, budget, dependencies, and security gates are validated.

12. DEVELOPMENT PLAN / GATES

① FINAL BRAND

↓ ② WEBSITE ARCHITECTURE

↓ ③ AI AGENT ARCHITECTURE

↓ ④ TOKEN UTILITY

↓ ⑤ TOKENOMICS

↓ ⑥ NFT SYSTEM

↓ ⑦ TECHNICAL ARCHITECTURE

↓ ⑧ WHITEPAPER

↓ ⑨ TESTNET / TEST ENVIRONMENT

↓ ⑩ SECURITY REVIEW

↓ ■ MAINNET DEPLOYMENT

↓ ■ WEBSITE LAUNCH

↓ ■ COMMUNITY LAUNCH

Recommended MVP order: intelligence website → first AI agents → research/community → NFT pipeline → ASGX integration → token deployment after legal/security/technical gates.

13. RISK, COMPLIANCE & DISCLOSURES

Crypto assets can be highly volatile and may involve loss of capital. AI output can be wrong, incomplete, delayed, or biased by source quality. Before any public token sale, staking/rewards, custody, governance, or other potentially regulated activity, obtain jurisdiction-specific legal advice covering licensing/registration, AML/KYC, consumer protection, taxation, advertising, securities/commodities, and virtual-asset rules.

This document is a product/architecture blueprint, not legal or financial advice.

14. PRODUCT SUCCESS METRICS

Measure product value: active users, research reads, source-verification rate, citation coverage, agent latency, false-positive rate, Academy completion, community retention, NFT utility usage, AI-credit utilization, uptime, security incidents, and user-reported usefulness.

Token price is not the KPI for whether the intelligence platform works.

15. ONE-PAGE BLUEPRINT

ASUGALAKX → MARKET INTELLIGENCE → DATA + NEWS + MACRO + WEB3 → 7 AI AGENTS → VERIFIED CONTEXT + RESEARCH → WEBSITE + ACADEMY + COMMUNITY → NFT / 3D CHARACTER → ASGX UTILITY ON SOLANA → GOVERNED / DISCLOSED / AUDITED ECOSYSTEM

Definition of done v1.0: brand language, sitemap, agent responsibilities, utility model, illustrative tokenomics, NFT data model, technical stack, API/database scope, token specification checklist, whitepaper outline, roadmap gates, and risk framework are aligned and ready to hand off to design, backend, AI, blockchain, and security workstreams.
